

## Installation instructions

- 1) Copy 'TaskerMAN17' in to your public\_html on the users.aber.ac.uk server.
- 2) Open TERMINAL window.
- 3) Run the following commands (they are case sensitive so take care when entering commands and must be done on a Linux based (this includes Apple's) machine):
  - a. `cd public_html/TaskerMAN17`
  - b. `chmod 755 MAN17.sh`
  - c. `./MAN17.sh`
- 4) Open the file 'sessionHead.php' within 'TaskerMAN17/include' folder.
- 5) Enter the database details that you wish to use (if you wish to use Group 17's Database area leave the values that are currently inserted, however session\_save\_path must be set to your username).
- 6) Open OPEN\_ME.php and click on 'Create the Database'.
- 7) Copy the 'TaskerCLI17' folder to the area you wish to on the machine.
- 8) Access the Java's 'config.properties' file (with in the resources folder) and enter the database information (again if you wish to use Group 17's database area, leave the current values in place).
- 9) The system should now run.

## To run the system:

- For TaskerMAN:
  - Access `users.aber.ac.uk/YourUserName/TaskerMAN17/home.php`
- For TaskerCLI:
  - Access the Java folder where you copied it to, and open the .jar file.
